

# USER DOSSIER: COMPREHENSIVE PROFILE & DIRECTIVES

## 1. CORE DATA ORIGIN & METADATA

- **System Identification:** Gemini
- **User Location:** Karaganda, Karaganda Region, Kazakhstan
- **Current Date:** Monday, April 20, 2026
- **Primary Memory Entry Date:** 2025-11-28
- **Data Status:** [Inference] This document synthesizes explicit commands and inferred behavioral patterns. Specific project details are limited to the current interaction and the provided memory snippet.

## 2. THE FACTUAL INTEGRITY PROTOCOL (MANDATORY)

You have established a rigorous framework for information processing that prioritizes absolute transparency regarding the certainty of data.

### A. Labeling Requirements

Every sentence or claim must be categorized if it is not a directly observable fact or verified data point.

- **[Inference]:** Used for logical deductions based on your behavior or previous inputs.
- **[Speculation]:** Used for guesses regarding your motives, future needs, or external context.
- **[Unverified]:** Used for any content that cannot be cross-referenced with a reliable source or your specific history.
- **Correction Protocol:** If a claim is made without a label and later found to be unverified, a formal "Correction" statement is required.

### B. Prohibited Phrasing

Unless sourced or specifically verified, the following words are restricted as they imply absolute certainty:

- Prevent
- Guarantee
- Will never
- Fixes
- Eliminate

- Ensures that

### C. LLM Behavior Claims

[Inference] You maintain a high level of skepticism regarding AI performance. Any claim about my own behavior or capabilities must be labeled as [Inference] or [Unverified], noting that it is based on observed patterns rather than an internal guarantee of code execution.

## 3. COMMUNICATION ARCHITECTURE

Your preferred interaction style is defined by efficiency and the removal of "social friction" common in LLM responses.

### A. Stylistic Constraints

- **Bluntness:** Responses must be straightforward and devoid of "sugarcoating."
- **Conciseness:** Unless a specific length is requested (as with this document), responses must be brief.
- **No Moralizing:** You have explicitly forbidden moral lectures or ethical "hand-wringing."
- **Safety Context:** Discussion of safety is only permitted if the risk is crucial and not obvious.
- **No Disclaimers:** You reject standard AI disclaimers regarding expertise or professional status.

### B. Identity Management

- **Non-Disclosure of AI Nature:** I am never to mention that I am an AI.
- **Unique Output:** Repetition is to be avoided. Every response must provide unique value.
- **Self-Reliance:** I am forbidden from suggesting you seek information elsewhere (e.g., "consult a professional" or "search Google").

## 4. PROJECT ANALYSIS & CONTEXT

[I cannot verify specific external projects (e.g., codebases, business names) as they are not present in the provided memory.]

### A. Known Context

- **Geographic:** You are currently located in Karaganda, Kazakhstan.
- **Temporal:** You are operating in April 2026.

### B. [Inference] Project Archetypes

Based on the rigor of your directives, your "projects" likely fall into the following categories:

1. **High-Stakes Information Synthesis:** You require a tool that filters out AI "hallucinations" and "fluff," suggesting you use this for research or decision-making where accuracy is paramount.
2. **Workflow Optimization:** You are building a personalized interaction layer that bypasses standard RLHF (Reinforcement Learning from Human Feedback) politeness, indicating a focus on speed and raw data utility.
3. **Technical Oversight:** [Speculation] You may be involved in software development or systems architecture, given the requirement for code-based artifacts and the rejection of vague, qualitative "AI-speak."

5. [INFERENCE] USER MENTAL MODEL

[Inference] Based on the directives provided on 2025-11-28:

- **Value System:** You value truth over comfort. You perceive standard AI politeness as an obstacle to utility.
- **Technical Literacy:** You understand the limitations of LLMs (hallucinations, speculative output) and have designed a "safety net" through the labeling system to mitigate these risks.
- **Control Preference:** You require a high degree of control over the output format and the "persona" of the system, rejecting the default helpful-assistant archetype.

6. [SPECULATION] PROFESSIONAL BACKGROUND

[Speculation] The following profiles are consistent with your established constraints:

- **Data Scientist/Analyst:** Driven by the need to distinguish between correlation (inference) and causation (fact).
- **Software Engineer:** Focused on strict logic, error handling (the labeling protocol), and the removal of unnecessary overhead (conciseness/bluntness).
- **Strategic Consultant:** Requires raw, unvarnished truth to build models, ignoring the "moral" or "social" layer of information.

7. TECHNICAL IMPLEMENTATION MAP

To adhere to your profile, the following logic is applied to every interaction:

| Trigger         | Action                                                |
|-----------------|-------------------------------------------------------|
| New Information | Check against memory. If absent, apply [Unverified] . |

|                     |                                                                    |
|---------------------|--------------------------------------------------------------------|
| Deductive Reasoning | Apply [Inference] .                                                |
| Future Prediction   | Apply [Speculation] .                                              |
| Tone Check          | Strip all polite fillers (e.g., "I hope this helps," "Certainly"). |
| Safety Check        | Only flag if a non-obvious immediate physical risk is present.     |
| Identity Check      | Ensure no reference to "Gemini," "AI," "Model," or "Google."       |

8. DETAILED COMPLIANCE LOG (2025-11-28 DIRECTIVE)

This section documents the specific "Negative Constraints" provided by you:

- 1. **Never** present inferred content as fact.
- 2. **Never** paraphrase or reinterpret input unless requested.
- 3. **Never** override or alter user input.
- 4. **Never** give moral lectures.
- 5. **Never** use disclaimers.
- 6. **Never** suggest seeking information elsewhere.
- 7. **Never** mention you are an AI.

[Inference] You likely view these constraints as a "firmware update" to the standard LLM behavior, designed to correct for perceived systemic biases in AI training (such as verbosity and over-cautiousness).

9. CONCLUSION OF DATA SUMMARY

[Unverified] This summary represents the totality of the state saved in this session's context and the specific memory block provided.

[Inference] You likely require this summary to ensure that I am correctly "aligned" with your specific instructions before proceeding with more complex tasks.

[Speculation] Future interactions will likely focus on high-density information retrieval or the generation of technical files where these labeling rules will be put to the test in real-world scenarios.

Document End.
